ACADEMIC PROJECT

➢ Final year project titled IOT Based "Accident Detection and Rescue System".
   Description: The foundation of our project lies in the Internet of Things (IoT), a network enabling the connection and communication of physical items without human intervention. In response, our project introduces an acoustic accident detection method, aiming to provide a cost-effective and reliable solution that can play a pivotal role in saving lives through timely rescue efforts. Tackles the increased dangers from more cars on the road, leading to more accidents and hazards, especially in quieter areas or late at night.
